Race to Arrays Game

You will need 30 counters, 2 dice, a timer and squared paper

- Place a pile of 30 counters between the two players and put 5 minutes on a timer

- Players must take it in turns to roll two dice and multiply the numbers together

- The two players should race to draw as many arrays that total that number as possible
  For example, if you roll 2 and 5, you must create as many arrays of 10 as possible in ten minutes such as 1 x 10, 2 x 5, 5 x 2...

- At the end of each round, take a counter for every correct array that you have made

- The winner is the player with the most counters when the pile has run out!
