

SIDE TO SIDE - 3

For 2 players. You will need: 0-9 dice, a spinner, pencil and 20 counters (2 colours).

How to Play...

- Player 1 places a counter on any of the hexagons on the left and travels across to the right
- Player 2 places a counter on any of the hexagons on the right and travels across to the left
- Players take it in turns to roll the 0 to 9 dice and look at the touching hexagons to see if any of them include the number on the dice
- If you can find one, read the whole number then partition your number (e.g. 467 is $400 + 60 + 7$) and then spin the spinner to select two other ways to partition your number (e.g. if you landed on tens you might partition your number as 467 is $400 + 10 + 50 + 7$ and $400 + 20 + 40 + 7$)
- If your partner agrees it is correct, cover it with a counter in your colour - once a number is covered, it cannot be used again!
- If you cannot find a number, you miss a turn

The winner is the first player to reach the other side!
