

SIDE TO SIDE - 2

For 2 players. You will need: a 0-9 dice and 35 counters.

How to Play...

- Player 1 places a counter on any of the hexagons on the left and travels across to the right
- Player 2 places a counter on any of the hexagons on the right and travels across to the left
- Players take it in turns to roll the 0 to 9 dice and look at the touching hexagons to see if any of them include the number on the dice
- If you can find one, read the whole number then partition your number
For example, if you rolled a 6 and the next number was 467, you would say to your partner: "460 is 400 + 60 + 7"
- If your partner agrees it is correct, cover it with a counter in your colour - once a number is covered, it cannot be used again!
- If you cannot find a number, you miss a turn

The winner is the first player to reach the other side!
