

COVER MULTIPLES

For 2 players. You need: a 1-6 dice and 17 counters.

How to play

- Place a counter in any position on the outside track of circles - you will both move the same counter
- Players should then take 8 counters each, making sure each player has a different colour
- Take it in turns to roll the dice to decide how many moves you can make in either direction
- Look for a number on a hexagon which is a common multiple of the numbers you landed on
- If you can find a common multiple, cover the hexagon that it's in

The winner is the first person to put down all their counters
