

STAR ROW

For 2 players. You need: six counters.

How to play

- Each player should choose a colour of counter to be 'their colour'
- Take turns to place a counter in your colour in a black circle until you have placed your three counters down
- Now you can move any one of your counters into an uncovered circle
- Before you move into a circle, however, you must answer both the questions in that circle
- If you are correct, you can slide your counter
- If you answer incorrectly, miss a turn!
- Keep taking it in turns

The winner is the first person to get three counters in a row along a straight line
