

SQUARE IT

For 2 players. You need: two 1-6 dice and two different coloured counters.

How to play

- Player 1 places a counter on any hexagon on the left-hand side with the objective to move to the right
- Player 2 places a counter on any hexagon on the right-hand side with the objective to move to the left
- Take it in turns to roll both of the dice
- You should work out either the square of either number, or you can add them together and square the total
- If any of the hexagons touching yours is the answer, you can move your counter onto it
- If the answer isn't touching your hexagon, you stay where you are
- Keep taking it in turns

The winner is the first person to reach the other side
